

# Self-Assessment - Operation Worksheet

---

<p>Corporation _____</p> <p>Site address _____ _____ _____</p> <p>Person(s) Completing this Worksheet _____</p>	<p><b><u>Instructions for Self-Assessment - Operation</u></b></p> <p>For each <b>PRACTICE</b> select the rating (1-4) that best describes your operation. Write your rating in the second last (<b>YOUR RATING</b>) column. In the last (<b>ACTION PLAN</b>) column describe the actions you plan to take to improve your rating where appropriate.</p> <p><b>8 Resource sheets</b> are available that describe each practice, ratings for it and some ideas for improvement.</p>
---	---

**Brief Description of Operation:** (eg. Type of equipment, materials used, salt tracking system, training, etc.)

## Self-Assessment - Operation Worksheet

PRACTICE	RATING				YOUR RATING	ACTION PLAN
	4 - BEST	3	2	1		
<b>GETTING A HANDLE ON THE AMOUNT OF MATERIAL USED</b>						
Equipment Calibration  <i>See Resource Sheet #1</i>	Equipment is calibrated at start of each season. <b>and</b> Equipment calibration is checked. <b>and</b> Equipment is recalibrated whenever salt delivery system is serviced. <b>and</b> Calibration records are kept.	Equipment is calibrated at start of each season. <b>and</b> Equipment calibration is checked. <sup>1</sup> <b>and</b> Equipment is recalibrated whenever salt delivery system is serviced.	Equipment is calibrated at start of each season but never checked. <b>or</b> Equipment is calibrated whenever the salt delivery system is serviced.	Equipment is not calibrated.		
Material Application Rates  <i>See Resource Sheet #2</i>	The application rates are known and documented. <b>and</b> The application rate is adjusted to suit the current and forecast conditions. <b>and</b> Pavement temperatures are used in determining the material to use and the application rate. <b>and</b> Staff is trained in and understands the material application rates.	The application rates are known. <b>and</b> The application rate is adjusted to suit the current and forecast conditions.	The application rates are estimated. <b>and</b> The amount of material applied is adjusted to suit conditions	The application rate is <u>not</u> known. <b>and</b> A single application rate is used for all conditions.		

<sup>1</sup> The calibration check can simply be a comparison of the amount of salt actually applied to the amount that was planned. Where there is a significant difference then the system should be checked.

## Self-Assessment - Operation Worksheet

PRACTICE	RATING				YOUR RATING	ACTION PLAN
	4 - BEST	3	2	1		
Tracking Material Usage  <i>See Resource Sheet #3 and the Tracking section</i>	Material use is tracked by event and location. <b>and</b> Material use is reviewed to assess compliance with BMPs. <b>and</b> Practices are reviewed to reduce material use.	Material use is tracked by event and location. <b>and</b> Material use is reviewed to assess compliance with BMPs.	Annual material use is tracked and compared year-to-year.	Material use is not tracked.		
<b>REDUCING AN OPERATIONS IMPACT ON THE ENVIRONMENT</b>						
Use of Liquid Materials  <i>See Resource Sheet #4</i>	Direct liquid application <sup>2</sup> is used. <b>and</b> All solid salt is pre-wetted <sup>3</sup> or pretreated <sup>4</sup> .	All solid salt is pre-wetted <sup>3</sup> or pre-treated <sup>4</sup> .	Some solid salt and/or sand is pre-treated <sup>4</sup> .	Liquids are not used.		
Use of Low or Non-Chloride Based Snow and Ice Control Materials <sup>5</sup>  <i>See Resource Sheet #5</i>	Low or non-chloride based materials are always used instead of road salt where warranted to reduce the amount of chloride entering the environment.	Low or non-chloride based materials are frequently used instead of road salt where warranted.	Some low or non-chloride based materials have been tried.	Only chloride based snow and ice control materials are used.		

<sup>2/</sup> **Direct liquid application** means the application of a liquid material (e.g. salt brine) directly onto a pavement or concrete surface using a spray or dribble bar system.

<sup>3/</sup> **Pre-wetting** means the application of a liquid to a solid material at the spinner or broadcast point just before application the parking lot or road. It is also called **on-board pre-wetting** to indicate that the liquid is also carried on the vehicle and sprayed on the solid just before it is applied.

<sup>4/</sup> **Pre-treating** means the application of a liquid to a solid material while it is in storage or as it is being loaded on the truck. With pre-treating, the liquid is in contact with the solid for a significant period of time before it is applied to the road.

<sup>5</sup> Always check the chemical content list on the bag. Many products claiming to have low chloride content or be environmentally friendly still have high chloride content.

## Self-Assessment - Operation Worksheet

PRACTICE	RATING				YOUR RATING	ACTION PLAN
	4 - BEST	3	2	1		
Salt Storage  <i>See Resource Sheet #6</i>	All salt is stored on impermeable pad. <b>and</b> All salt is covered by a roof. <b>and</b> All salt impacted drainage is collected and properly disposed of. <hr/> <b>or</b> Salt is never stored on-site	All salt is stored on impermeable pad. <b>and</b> All salt is covered by a roof.	All salt is stored on impermeable pad. <b>and</b> All salt is covered by a tarp.	Salt is stored outside on a permeable pad. <b>or</b> Salt is uncovered.		
Sand/salt Mix Storage  <i>See Resource Sheet #6</i>	All mix is stored on impermeable pad. <b>and</b> All mix is covered by a roof. <b>and</b> All salt impacted drainage is collected and properly disposed of. <hr/> <b>or</b> Mix is not stored on-site during the winter months.	All mix is stored on impermeable pad. <b>and</b> All mix is covered by a roof.	All mix is stored on impermeable pad. <b>and</b> All mix is covered by a tarp.	Sand/salt mix is stored on a permeable pad. <b>or</b> Sand/salt/mix is uncovered.		
Liquid Storage  <i>See Resource Sheet #6</i>	All liquid is stored in a tank or totes on an impermeable pad. <b>and</b> Collision protection is provided. <b>and</b> Secondary containment is provided. <hr/> <b>or</b> Liquid is not stored on-site during the winter months.	All liquid is stored in a tank or totes on an impermeable pad. <b>and</b> Collision protection is provided.	All liquid is stored in a tank or totes on an impermeable pad.	All liquid is stored in a tank or totes on a permeable pad or earth.		
Material Storage Over Summer  <i>See Resource Sheet #6</i>	No material is stored on-site over the summer months.	All material is securely stored in tanks or on an impermeable pad covered with a roof.	All material is stored in secure tanks or on an impermeable pad covered with a tarp or similar cover.	All material is stored in simple tanks/totes or on a permeable pad uncovered.		

## Self-Assessment - Operation Worksheet

<b>OPERATIONAL IMPROVEMENTS AND BASIC STORM RESPONSE</b>						
Plowing	PROACTIVE RESPONSE			REACTIVE RESPONSE		
<i>See Resource Sheet #7</i>	Plowing is used to remove accumulated snow before it becomes a hazard. <b>and</b> Plowing is scheduled to allow applied materials time to work. <b>and</b> Plowed snow is stockpiled so as to avoid problems with meltwater or snowdrifting.	Plowing is used to remove accumulated snow before it becomes a hazard. <b>and</b> Plowing is usually planned to allow applied materials time to work.	Plowing is used to remove accumulated snow before it becomes a hazard.	Plowing is only used when the accumulation of snow becomes a hazard.		
Salt Management Training  <i>See Resource Sheet #8 and the Training section</i>	Supervisors <sup>7</sup> are trained in best salt management practices. <b>and</b> Operators <sup>6</sup> are trained in best salt management practices. <b>and</b> Annual salt management refresher training is held. <b>and</b> Training records are maintained.	Supervisors <sup>7</sup> are trained in best salt management practices. <b>and</b> Operators <sup>6</sup> are trained in best salt management practices.	Supervisors <sup>7</sup> are trained in best salt management practices.	No salt management training is carried out.		

**Additional comments:**

---

---

---

---

<sup>6</sup> **Operators** are those people operating winter maintenance equipment (plows and spreaders).

<sup>7</sup> **Supervisor** refers to those people making salt application decisions.

## Self-Assessment - Operation Worksheet

---

### **8 Resource Sheets are available to help you complete this Worksheet.**

# 1 – Equipment Calibration	# 2 – Material Application Rates
# 3 – Tracking Material Usage	# 4 – Use of Liquids
# 5 – New and Alternative Snow and Ice Control Materials	# 6 – Improved Material Storage
# 7 – Plowing to Improve Salt Management	# 8 – Salt Management Training

#### **Next Steps**

1. Implement the Salt Management Action Plan.
2. Monitor the implementation and take the necessary actions to reduce salt use.
3. Transfer this information to the Annual Certification Report.
